ClearMomentum, Inc. a developer of Financial Analytic software announced earlier today the first feature release of ClearFinancials™ CME and CFE, an application tool geared for Private Equity managers, Venture Capital Providers and Commercial Lenders.

The new feature of ClearFinancials™ is positioned to change the way financial review meetings are conducted between executives, shareholders and financial partners.

Traditionally, financial performance data is packaged in static graphs supported by spreadsheets and presented to managers, executives, investors and financial partners for review. ClearFinancials™ changes the way in which financial review meetings are conducted by introducing a platform that creates a highly dynamic and interactive environment.

ClearFinancials™ pulls monthly financial data from each company division where it is assembled into a central repository. In the cases of Private Equity or Commercial Lenders, the data is pulled from each respective portfolio company or client. The data from separate divisions or separate operating systems is formatted where it is dynamically queried leveraging a host of analytics to present everything from simple current ratios to highly complex company specific metrics.

Executives can dynamically view trends, ratios and performance metrics, then input variables to view predictive outcomes from everything from cash flow to company burn rates. The system can be utilized in a physical boardroom setting or conducted from various locations with web access and a password.

ClearFinancials™ changes the very complexion of the meeting from one of rigid charts and graphs to one that is collaborative and highly dynamic.

Company executives may now conduct interactive meetings that are both reflective and predictive. The application enhances communication, facilitates learning and inspires dialogue among colleagues. The dynamic nature of the data is ideal for Board-level meetings among managers, investors and financial partners.

The specific functionality was designed as a solution for Private Equity and Capital Managers but is equally useful for stand-alone companies.
