

PY Newswire-

Rochester, NY May 29, 2008

ClearMomentum, Inc., a developer of CPM, Corporate Performance Management software and services announced the addition of new features that dramatically change and improve the manner in which CFOs manage loan covenants. The news marks the third major feature release this year as the company continues an aggressive 2008 product development schedule.

The new functionality provides the ability to efficiently create complex loan covenants and model hypothetical company performance scenarios in relation to the covenant. Should expected company performance approach critical covenant thresholds, the CFO may adjust underlying drivers to solve for performance levels necessary to avoid violating important loan covenants. The application enables the CFO to pinpoint specific management initiatives and dispatch performance expectations to key stakeholders through dashboards that are fully integrated with the corporate budget. The CFO or analyst may model covenant conformance for future periods or observe whether new loan covenants would have been violated in past fiscal periods. The graphic monthly view of both direction and trajectory of covenant performance provides the analyst with deep analytic insight into future loan covenant conformance. The feature represents yet another example of ClearMomentum's relentless mission to develop functionality that fully transforms powerful analytics into actionable, *purpose-driven* strategy.

The robust functionality provides key management information to corporate managers and stakeholders that depend upon ClearMomentum's flagship CPM solution, ClearFinancials® and is equally useful to capital providers including venture, private-equity, hedge-fund and mezzanine fund managers that utilize ClearFinancials® to manage portfolio company performance.

ClearMomentum provides executive managers and capital providers with a '*purpose driven*' CPM solution that integrates financial strategy with business analytics, modeling, budgeting and reporting. The solution provides an unmatched user experience delivered via SaaS and can be deployed across the enterprise efficiently and cost effectively.
